Grandma Pat

“Hi, I’m Lewis and I invented Jelly Drops for my grandma Pat after she became hospitalised with dehydration. After living in her care home for a month to try to find a solution, I came up with the idea of Jelly Drops!

Over the past 18 months Jelly Drops have been carefully refined by a team of designers, engineers and food scientists with a passion for social good. We’ve recently launched with a fantastic response! Below you can see some of our amazing feedback from our early customers ”

Lewis

feedback from our community

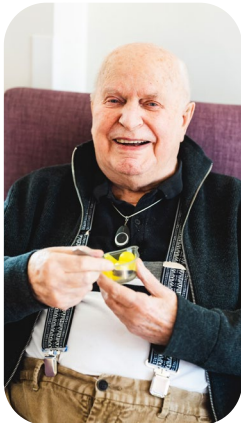

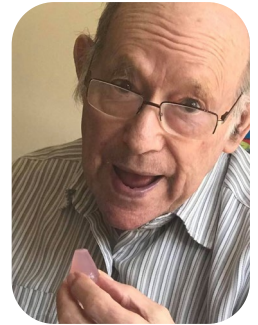

“My 84 year old mother with Alzheimer’s loves them. It is really difficult at times to get her to eat and drink but there is no problem with these. It generally takes her about a day to get through a box of them hence I have now subscribed! ”

“Have proved beneficial to my mum with vascular dementia. We are constantly ‘nagging’ her to drink more but she is happy to eat jelly drops with little encouragement ”

“Gran really enjoyed them, she said ‘the sweets you got me are delicious’. She is terrible at drinking water usually ”

“A HUGE thank you for the truly speedy delivery of my ‘test’ box to my father who has final stage Parkinson’s. HE LOVES THEM ”

“Love how the jelly drops engage with all the senses too. Visually bright, very tasty, nice to feel, nice smell and great sounding sweetie name ”

“I’m really pleased with and grateful for jelly drops! My Nan loves them and they allow us to get fluids into her without the stress of getting to drink all the time ”
